

RTV Silicones for Thermal Protection Systems

Advanced silicone products that can perform in the most extreme conditions

Since the beginning of time, people have looked up at the stars and longed to explore the world above them. For more than 60 years, Momentive has been part of the journey into space—providing the silicone in the boots of the first astronaut to walk on the moon—in the rockets that propelled those pioneers into orbit—and on every US manned space flight since. Building on the legacy of our past, Momentive continues to develop innovative silicones that help today's aerospace pioneers reach ever greater heights. From launch to landing, Momentive's advanced silicone products enable the next generation of space exploration.

Typical Benefits of RTVs for Thermal Protection

- Maintains critical properties for extended time over a wide range of extreme temperatures encountered by spacecraft from -115°C (-175°F) to 260°C (500°F)
- Remains flexible in the extreme low temperatures of space
- Excellent thermal insulation
- Low outgassing solutions to protect crew compartments and sensitive optical equipment from material contamination in extreme temperatures
- Very strong adhesion with primer to support structural integrity
- Electrically static dissipative solutions
- Room temperature cure
- Available in paste to flowable viscosities to accommodate a wide range of applications
